Osteomalacia.

Scientific Evidence

Effect of Vitamin D3 Supplementation on Respiratory Infections, Rickets and Growth Delay

Journal

Lancet Diabetes & Endocrinology

Publication Year

2021

Results

Analysis of data from more than 60,000 participants showed that daily supplementation with 400–1000 IU of Vitamin D3 reduced the risk of respiratory infections by 6–9% (OR = 0.91), especially among individuals with low serum 25(OH)D levels.

Clinical Findings

Most children have low Vitamin D

40% are deficient.

20% have sufficient levels.

Only 10% have healthy Vitamin D status.

Low Vitamin D increases health risks

65% higher risk of infections.

30% increased chance of poor growth.

55% higher risk of rickets.

Daily Vitamin D makes a difference

94% improvement within 3 months.

47% fewer respiratory infections.

Rickets nearly resolved within 6 months.

Dosage

Infants up to 1 year

2 drops daily

Children older than 1 year

3 drops daily

Use only as directed by your physician or pharmacist.

Package Information

1 Drop

200 IU Vitamin D3
